Baltic Sea Regional On-line Conference on Water Management in Agricultural landscapes

WORKSHOP No.3

Spatial planning and digital decision support

INVITATION/PROGRAM

NOVEMBER 9th 2021 (ZOOM), CET 9:30-11:30

Waterdrive project has looked for solutions to shared water problems in the Baltic Sea Region. One proven way is to learn from the experiences and practices of others. The ToolBox, built during the project, presents solutions to a wide range of common water management problems. In addition to the written solutions, some of the solutions are visualized in a StoryMap, which will inspire the use of the spatial data sets in the water management problems by giving examples. The best way to promote good water management is to be open to new ideas.

Certain areas tend to be highly vulnerable to nutrient leaching. Therefore, we need to increase the knowledge and awareness among the different stakeholders by developing, easy-to-use and accessible, Decision support systems targeting such areas. Such tools are needed for transferring complex research data and outputs into understandable and usable information accessible to end users at different levels.

The workshop will present the outputs of the Waterdrive project and discuss their contribution to practical water management work.

Welcome to listen and participate in the discussion!

WORKSHOP PROGRAM

- **Introduction to the need to use spatial data in water management**, by Ainis Lagzdīņš, LLU
- **Examples of the use of map-based material in water management - in the form of a Story Map**, by Sirkka Tattari & Juha Riihimäki, Finnish Environment Institute SYKE
- **Spatial planning toolbox - what can we learn from others, examples from different countries**, by Malgorzata Grodzicka-Kowalczyk, PHENO Horizon
- **Decision support systems for the local level planning**, by Mats Söderström & Omran Alshihabi, SLU
- **Discussion** moderated by Sari Väisänen SYKE.
